

GENERAL MAINTENANCE

Loll furniture will not rot and requires no paint, stain or ongoing maintenance to keep its beautiful appearance. It is a good idea to occasionally inspect the furniture fastening to ensure bolts are not loosening. Daily expansion and contraction caused by heating and cooling can occasionally loosen hardware.

FURNITURE CLEANING

Most often, a simple hose-off will do the trick. If there is more dirt, a simple wet rag and natural spray cleaner should be sufficient. Microfiber towels also work great. If there is dirt embedded in the texture, use mild soap and water and a stiff but gentle-bristled brush. You can power wash your furniture if you like that sort of thing.

CUSHION CLEANING

Sunbrella fabric, is the best available in the outdoor market, and is fabricated to be stain, mildew, and fade resistant. While the fabric does contain a finish that is water repellent, for better longevity, we do recommend covering or storing your product during heavy rainstorms or through the winter months. Sunbrella fabrics can, however, withstand seaside conditions and chlorine environments. The cushions are easy to clean, and we recommend simply spot cleaning with a mild soap and water. For more thorough instructions, please visit [Sunbrella's cleaning page](#).

FAQ

WHAT SHOULD I DO WITH MY FURNITURE WHEN WINTER COMES?

Nothing! Our durable HDPE can be left out year round. Designed to weather all four seasons, there is no need to store or cover your furniture in the winter. Our only recommendation is if by chance you receive an abnormal amount of snow, like feet upon feet, to give your furniture a little relief and shovel some of that snow off of it.

CAN I TAKE MY FURNITURE APART?

Once assembled, Loll products are intended to stay assembled.

IS IT SAFE TO KEEP MY LOLL FURNITURE BY THE FIRE PIT?

Yes! Just don't throw it in the fire. The melting point of our material is 275°F – which means if you do have a problem with melting, you've got bigger problems to worry about first.

MY DOG ATE MY LOLLYGAGGER LOUNGE ARM. NOW WHAT?

Fret not if a part of your Loll becomes damaged! Our products are made so that parts can be replaced. Please **email us** a photo of the damaged piece, and we provide a quote for the replacement parts needed.
